Professional Summary

M.Sc. Computer Science student specializing in data analysis and visualization with proficiency in Python, SQL, Tableau, and Power BI. 3+ years of professional experience in Sales Operations and App Development. Experience building executive dashboards and transforming complex data into actionable insights. Motivated to make a meaningful impact by fostering strong collaboration, communicating clearly, applying analytical thinking, solving problems efficiently, and driving continuous process improvement.

Technical Skills

- **Languages & Databases:** Python (Pandas, NumPy, Scikit-Learn, Matplotlib, Seaborn), SQL (PostgreSQL, MySQL), Java, C
- **Data Visualization & BI:** Tableau (LOD Expressions, Calculated Fields), Power BI (DAX).
- **Data Analytics & Modeling:** RFM Segmentation, Explainable AI (SHAP, LIME), Statistical Analysis, Data Cleaning & ETL, Requirements Engineering.
- **Tools & Platforms:** Git, Jira, ,Azure DevOps, Salesforce CRM
- **Languages:** English (C1), German (A1)

Technical Experience

Working Student – Sales Operations **February 2024 – March 2026**
Emnify *Remote, Germany*

- Ensured Salesforce CRM data integrity through validation, cleanup of 15% fields out of 500+ fields, and team training to uphold long-term quality standards.
- Designed and implemented Salesforce automations, reports, and interactive dashboards to streamline operations and enable data-driven decision-making.
- Managed contract implementation within Salesforce, aligning business agreements with system processes to support compliance and operational efficiency.

Packaged App Development Associate **July 2021 – September 2023**
Accenture *Hyderabad, India*

- Conducted meetings with stakeholders to collect their requirements and convert intricate customer service and order management needs into technical reporting standards.
- Reviewed and restructured the existing dashboard system, pin pointing and eliminating unnecessary metrics to enhance performance and ease of understanding for users.
- Designed a tailored Customer Service Order Management dashboard within Salesforce, enabling real-time tracking of order processes and the time taken to resolve support requests.
- Improved the data flow systems for order monitoring, which helped reduce inconsistencies between customer service records and completed order reports.
- Drove end-to-end Salesforce administration and business analysis, from requirements gathering, field cleanup, and process automation to user onboarding and UAT, ensuring efficient workflows and successful project delivery.
- Recognized for excellence with "Most Valuable Player of the Month" and "Star Performer" awards, highlighting outstanding performance and impact.

Education

M.Sc. in Computer Science at Saarland University, *Saarbrücken, Germany* **Present**
B. Tech in Electronics and Communication Engineering at GITAM deemed to be University, *Visakhapatnam, India* **June 2021**

Projects

E-commerce Revenue Optimization & RFM Segmentation(PostgreSQL,Power BI)

- Leveraged PostgreSQL to analyze a $7.26M e-commerce dataset, uncovering $326,501 in operational waste and delivering actionable recommendations for capital reallocation.
- Modeled an 8.4x efficiency shift by simulating the movement of marketing spend from low-margin to high-AUR (Average Unit Retail) segments.
- Engineered an RFM segmentation model (PostgreSQL to Python) to analyze a 2% repeat customer rate and identify "Champion" segments for retention strategies.
- Created a narrative-driven dashboard that transformed complex SQL query results into compelling visual insights, enabling executive buy-in through effective data storytelling.

Holiday Sales Promo Dashboard (Tableau)

- Engineered interactive executive dashboards featuring KPI tiles, comparative charts, and dynamic tool tips to quantify holiday demand and promotional ROI.
- Developed automated narrative summaries using advanced calculated fields (e.g., ATTR, ZN) to surface headline insights dynamically, reducing dashboard clutter.
- Constructed uplift metrics (Promo vs. Organic) and visual call-outs to identify under performing segments, improving decision clarity for stakeholders.
- Executed high-precision data formatting, including custom alignment grids and consistent typography, to ensure institutional-grade reporting standards.
- Published and optimized performance on Tableau Public, documenting design rationale and storytelling flow for stakeholder transparency.

From Insights to Action: An Explainable and Agentic AI Approach to Hospital Cost Management(Python)

- Performed advanced analysis of SPARCS inpatient data using XAI methods (SHAP, LIME) to identify key cost drivers such as geographic region, hospital type, and patient demographics.
- Designed and implemented a hybrid XAI agentic simulation framework to model and assess targeted cost-reduction strategies while preserving care quality.
- Achieved demonstrable savings of up to $10,460 per patient, delivering hospitallevel insights that support strategic, datadriven decision-making.

Interests

- Reading books — self-help, biographies, and fiction
- Embroidery and creative craft work
- Nature walks and exploring Saarland trails
- Travelling and exploring new places with friends
